---

Dear Sirs, I have a short video of Radwinter Road / Walden Road approaching Swards End taken on Saturday 19th February. ( I am unable to attach to this email due to size but can Wassap it?) After any reasonable rain fall the road floods badly with a constant flow of water off the fields. The road surface and areas around the surface drainage grates are constantly eroding and always in a DANGEROUS condition. I have big concerns that there is a planning application for 230 dwellings to be built adjacent to this road. What will happen if this area next to the road is covered in concrete????

Please can you add or consider this video to the application objections. I am aware the closing date has passed but I feel this is a MAJOR concern with a potential huge impact on the environment.

Yours Faithfully  
Brian Silvester.
